Product Description

Product Description of Titanium Dioxide CR-510

CR-510 is a multi-functional product produced by chlorination process and has under surface treatment. This product has a better particle size distribution and is widely used coatings, inks, plastics and other fields. It can meet the needs of users for using a vari titanium dioxide at the same time, and effectively reduce inventory costs for users.

Product typical technical indicators

TiO2 content, %	94.5
surface treatment	Zirconium, Aluminum, Organics
Grading standards	ISO591: R2; ASTM D-476-84: II(IV)
Rutile content, %	99.9
L*	98.3
b*	1.65
Specific gravity, g/cm3	4.1
Color reduction power, %	118
pH	7.5
Oil absorption, g/100g	17.5

Average particle size, μm	0.27
Carbon Black Base Color (CBU)	14

Product Features

bluish tint
 high brightness
 High weather resistance
 Multifunction

application advice

Indoor and outdoor glossy and semi-gloss architectural coatings, automotive OEM and refinish paints, coil coatings, industrial anti-corrosion coatings, decorative coatings and powder coatings and other coating applications.

Letterpress printing, offset printing, gravure printing and other ink fields.

Engineering plastics, color masterbatches, profiles and other plastic applications.

safety and health

Taike® series titanium dioxide products are non-toxic. If you accidentally inhale a large amount of them, you should immediately move them to a place with fresh air; if your eyes come into contact with titanium dioxide, wash them with plenty of water immediately; if necessary, ask professional medical personnel to dispose of them.

Product packaging

The outer layer of the product packaging bag uses three-in-one paper-plastic composite paper, and the inner layer uses high-quality paper. The net weight of each bag is 25kg. If customers have special requirements, different forms of packaging can also be provided.

Storage and transportation

Products should be sorted and stored in batches in a ventilated and dry place. They cannot be stored directly on the ground. They must be separated by trays or plastic sheets, and should be protected from moisture and sun. It is strictly forbidden to come into contact with items that can react with the product. When transporting and loading and unloading, it is necessary to load and unload lightly, and the products of the same batch number should be placed together to prevent packaging pollution and damage. The product should be protected from rain and sunlight during transportation.
